

Security of Drones

Objective 1

Note: Teams should provide sufficient technical detail to demonstrate feasibility without submitting generic or excessively long material.

Stage 1 Participant Submission - Report Structure

Team and Submission Information

Proposed Design Name	
Date of Submission	

Objective: Drone Forensics Toolkit Development

1. Executive Summary

Maximum 2–3 pages. Describe the proposed solution, key innovation, target UAV platforms, evidence sources, major forensic capabilities, expected outcome and current development status.

2. Understanding of the Problem

Describe drone forensic investigation challenges, target investigation scenarios, types of digital evidence, current limitations/gaps, and the proposed approach.

3. Proposed Drone Forensic Toolkit

Include overall architecture and descriptions covering but not limited to **Supported UAV Platforms, Digital Evidence Acquisition Methodology, Evidence**

Preservation & Integrity, Forensic Data Extraction & Parsing**4. Data Analysis & Automated Forensic Reporting**

Describe the analysis and reconstruction techniques used to extract meaningful findings from the acquired evidence, and how these are presented in a forensic report.

5. Development Plan

Provide development plan with milestones

6. Validation & Testing Methodology

Define test environment, UAV platforms, test evidence/datasets, test cases, ground truth, expected results, repeatability, accuracy/completeness metrics, performance metrics and evidence chain and failure handling.

Suggested Validation Test-Case Format

Test ID	Test Description	Input Evidence	Expected Result	Success Criteria
TC-01				
TC-02				
TC-03				
TC-04				
TC-05				
TC-06
